

Product Storage Guidelines

Storage area should be kept cool and dry between 15-30° C, well-lit and ventilated.

Clean the storage area regularly and maintain building repairs to prevent pest infestation.

Store cartons off the floor on pallets or shelving.

Cartons should be right side up with carton labels visible and legible.

Maintain storage conditions during transport.

Store product in a locked and secure storage or cabinet, where only trained personnel have access.

Follow the FEFO Method: **“First Expiry First Out”**. Organize product to distribute product with earlier expiration date first.

Keep an inventory record of product received and distributed.

For Distribution

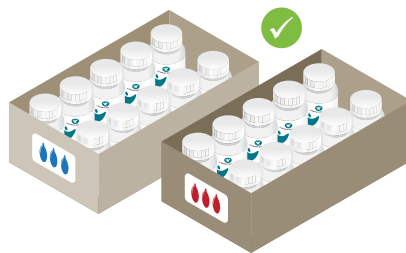

Separate damaged or expired product and label not for use. Dispose according to local guidelines.

Expired Product

Damaged Product

Keep same product type and batch together.

Avoid high temperatures, exposure to outdoor elements, and direct sunlight.

Do not store product near hazardous materials or dirty areas which may attract pests.
